Description

As Internet usage continues to become more mobile, users have an increasing expectation for wireless Internet access at public locations, such as in coffee shops, restaurants, hotel lobbies, convention centers, and airport terminals. Designed to support account generation, the EC-PP200 can print tickets using the built-in on-demand billing plan feature inside Edgecore Wireless LAN Controllers and Hotspot Gateways.

Another major highlight is that Edgecore Wireless LAN Controllers and Hotspot Gateways support QR Code Auto-Login. This unique feature allows guests to login automatically by using mobile devices to scan the QR Code printed on the EC-PP200's vouchers. In addition to the QR

Code, information on the printed tickets can be easily customized from Edgecore Wireless LAN Controllers and Hotspot Gateways according to an operator's needs. With the EC-PP200, creating Wi-Fi accounts and logging in is made much simpler.
